

## Overview of Multilizer solutions

Published February 6, 2008. Valid until further notice.

The purpose of Multilizer is to make translation and localization efficient. We provide tools, support and consulting for a wide range of translation and localization projects. The Multilizer tools combined with our consulting services offer an easy-to-use, expandable and scalable localization solution.

The core philosophy behind Multilizer is the following:

1. Multilizer reads the texts that need to be translated from several files and puts all texts in a single Multilizer project file
2. The single Multilizer project file is translated using effective tools such as
  - translation memories
  - change detection tools (to detect changes between file versions)
  - translation reuse tools
  - quality assurance tools
  - translation outsourcing tools
3. Multilizer puts the translated texts back to their original places thus creating the translated files

It is easy to start using Multilizer. Some of the key benefits such as translation reuse and automatic quality checks are realized instantly without any effort. Multilizer can be expanded through its flexible plug-in architecture to measure up to even the most complex localization projects. Multilizer offers also tools for localization process development and automation. Multilizer scales well with respect to both translation volume and complexity. All stages of localization are supported by our technical support engineers and consultants.

The keywords of Multilizer are:

- ease, both to start and to use
- efficiency
- expandability, it meets your evolving business needs
- scalability, both in relation to volume and complexity
- support, through our consultants and support engineers

Multilizer tool is offered in several versions, from the Lite edition for one-man companies to the Enterprise edition for companies striving for more productivity. Our technical support helps you use the Multilizer products and our experienced consultants guide you in more difficult technical issues as well as in localization process development and automation. Whenever you need our services you can contact us our world-wide reseller network.
